

TCG
Girder grab
for transportation and turning of
steel girders

Capacity 100 - 2000 kg

The main purpose of the CG girder turning clamps are for the transportation and turning of steel girders through 90°. They can be used individually or for longer beams used in in pairs in conjunction with a spreader beam. The clamps are attached to the horizontal flange of the girder and locked in place by the jaw locking lever. Once lifted the girder will turn through 90°.

These plate clamps are service-friendly, making it easy to exchange parts, which are readily available. Clamp repairs must be done by a trained person.

INFO

For longer girders use two clamps and a lifting beam!
